

Touring Superleggera designs the second model of the Gumpert range

World première of the GUMPERT TORNANTE by TOURING in Geneva

MILANO, 24th January 2011.

Touring Superleggera was commissioned by Gumpert the design of their upcoming new model, a 2-seater Fast Tourer based on a new central engine chassis and V8-powered driveline.

After setting new benchmarks for driving dynamics of street legal cars with the *apollo*, Gumpert requested the Milanese designer to add space, liveability and comfort to their typical sheer performance attitude. The result is a blend of very Italian sporty elegance and German high-end engineering.

The *GUMPERT TORNANTE by TOURING* opens a new class of automobiles born for the extremely dynamic and fast voyage, the Fast Tourers.

The Tornante features the original Superleggera construction principle: composite body panels on a space frame with carbon fiber monocoque.

The car will be unveiled on 1st March 2011 at the Geneva Motor Show.

Embargo: immediate
